

COL703 - Assignment2

Satisfiability Checker

Suyash Agrawal
2015CS10262

October 25, 2017

1 Running

```
sml wrapper.sml <input_file> <output_file>
```

This will run the program on $\langle \text{input_file} \rangle$ and print on terminal whether it is satisfiable or not. Also, it will output the prefix and postfix representation of the parsed input.

NOTE:

- The input file should not contain ‘.’ at end of statements.
- There should be no newline at the end of file.
- The output file should exist. i.e. Program will not automatically create the file.
- Some example test files are given in test folder
